OrcaLink

Modeling Potential Social Ties in Southern Resident Killer Whales

Aung Htut and Bowen Zhang University of Victoria

Connecting family records and sightings while preserving the evidence behind each connection

Existing sources

Center for Whale Research [1]

Dryad [2]

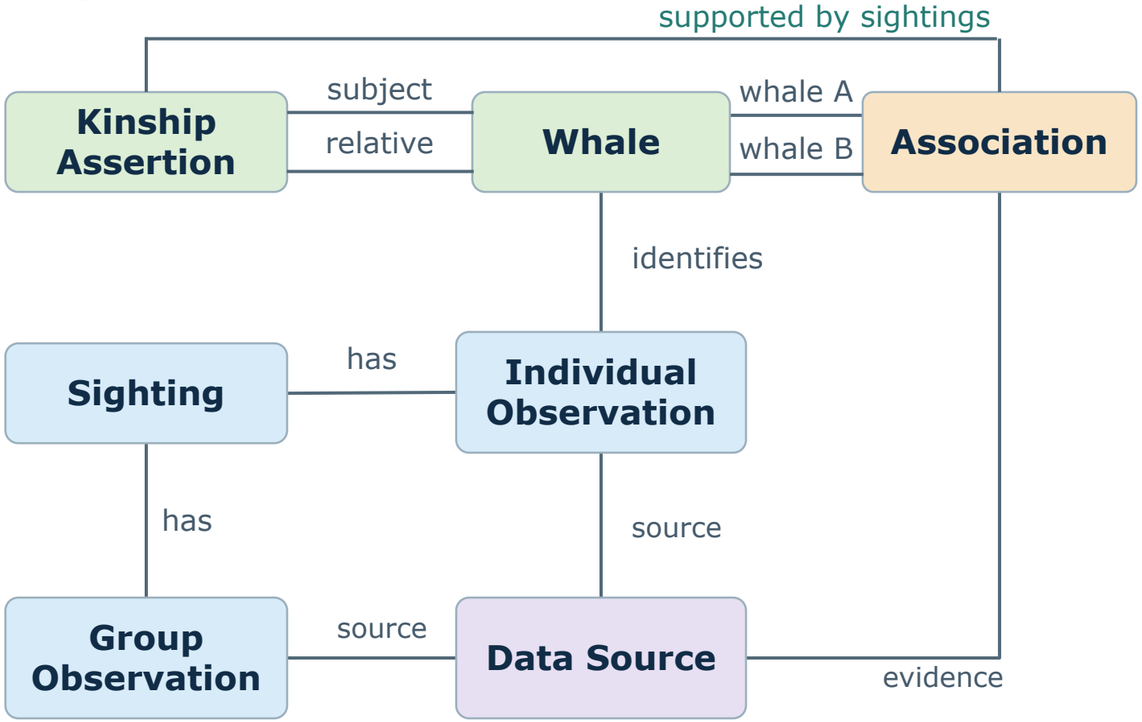

The Whale Museum [3]

The integration gap

Group reports do not confirm every individual whale

Proposed model

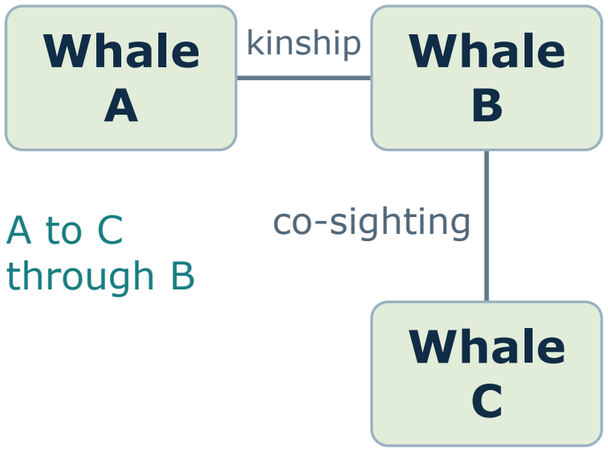

Simplified draft. Sources also support kinship assertions. Co-sighting associations require supporting sightings.

Why it matters

Researchers could explore family connections across records and check the evidence

Planned knowledge graph

[1] CWR, Orca Identification. [2] Thompson et al., Dryad (2026), doi:10.5061/dryad.gf1vhhn2f. [3] The Whale Museum, supplied sighting records.
